# How to use the Use Case Template

Step-1: Please access to [WoT Usecases repository](https://github.com/w3c/wot-usecases)  
(<https://github.com/w3c/wot-usecases>).

QR Code for the Use Case repository URL

Step-2: Please push a tag of “Issues”.

Step-3: Please push “New issue”.

Step-4: Please push “get started” of “Use Case Proposal for Gaps”.

Step-5: Please write a use case into the Use Case template.

Step-6: If you have some questions, Please push “Open a blank issue” and make a new issue.

# Trial by the TD Task Force

- TD Task Force wants to use the Use Case process to turn “worthy” issues into use cases
- Three trials were done so far.
  - Daniel Peintner: Writing to a Property Request returns a response. [Link](#)
  - Jan Romann: Simplifying security descriptions. [Link](#)
  - Luca Barbato: Profiles for converging interoperability. [Link](#)
- Experience Summary: We need to be able to extract the scenario, user story. Something more high-level to motivate the work on it. We should hold back the technical solution in the first level or step.
- More on this in tomorrow’s TD session. [Slides link](#)
