

Thing Description Browser / Enhancer for rapid application development

Background/Motivation:

- We are researching to improve productivity in the factory by attaching various sensors and display devices to provide rapid feedback to frontline workers.
- For rapid system development, we collect necessary information in the form of Thing description, and use with low-code programming tools.

What can be seen:

- Thing Description Browser / Enhancer : Collects and displays information on Things at the site using the WoT Discovery mechanism.
- Node Generator: Integrating WoT with Node-RED, low-code programming environment.

Using TDD as a knowledge base for device integration
