

WoT and SDW Joint Meeting

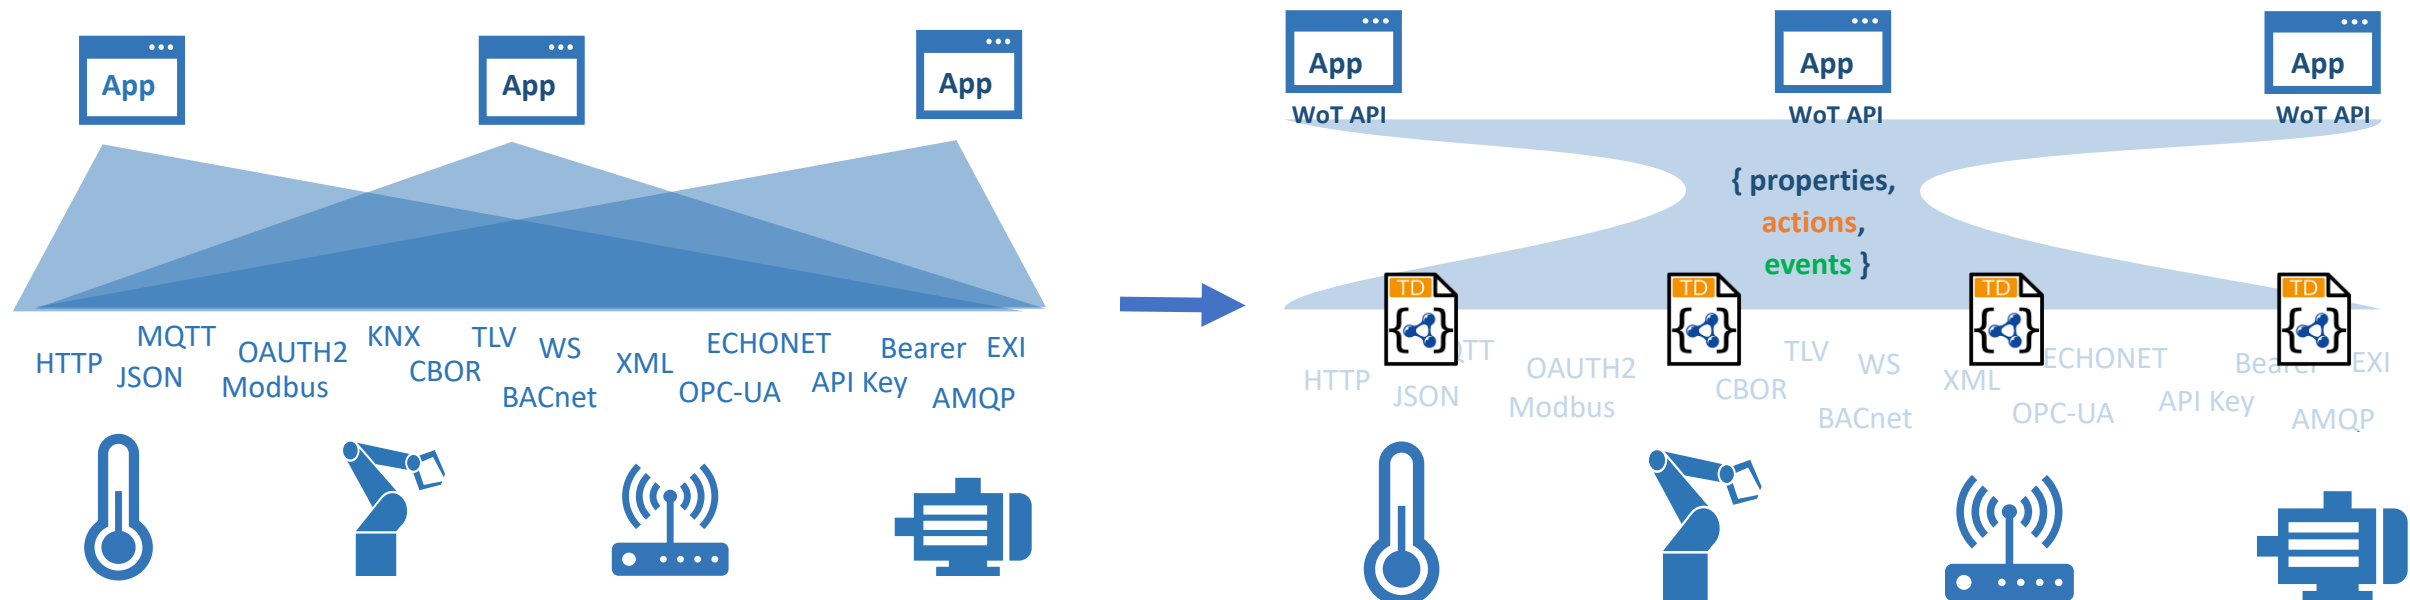

Michael McCool
27 September 2024
TPAC 2024

Agenda

- Speaker: Michael McCool, WoT/Intel (30m)
 - Spatial discovery and spatial metadata in TDs
 - Relationship to FIWARE and NGSI-LD
- Speaker: Rob Atkinson, SDW/OGC (30m)
 - SDW re-charter
 - GeoDCAT deliverable
 - potential for related WoT profiles
 - FIWARE model examples
 - see <https://github.com/smart-data-models/SmartCities>
- Discussion (30m)

W3C Web of Things (WoT)

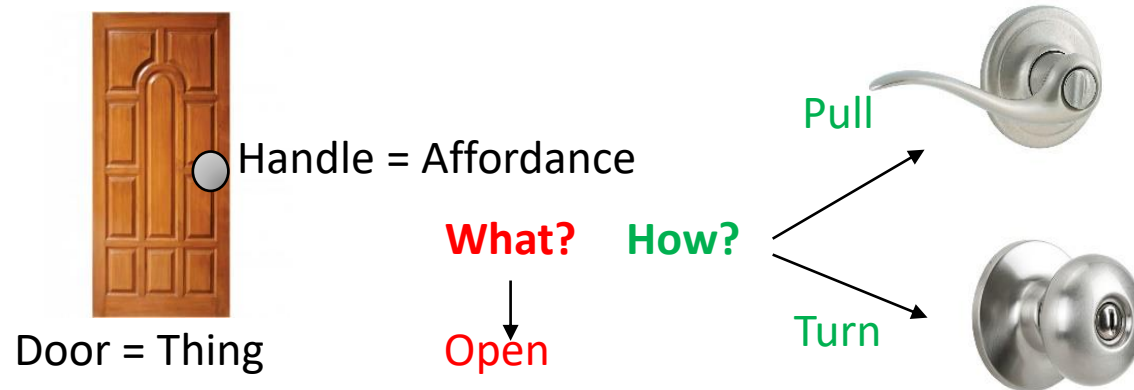

- W3C Working Group goal: Adapting web technologies to IoT
- Already published: Thing Description (TD) metadata format
 - TD describes the available interactions (network API) of a Thing
- New deliverables in progress, including Discovery
 - How does a potential user obtain the TD for a Thing?

Descriptive Interoperability: TDs

WoT Architecture

- Constraints
 - "Things" must have a TD
 - Must use URIs, IANA media types, etc.
- Thing Description Affordances
 - Describes WHAT the possible choices are
 - Describes HOW to interact with the Thing

WoT Thing Description (TD)

```
{
  "@context": [
    "https://www.w3.org/2022/wot/td/v1.1",
    { "iot": "http://iotschema.org/" }
  ],
  "id": "urn:dev:org:32473:1234567890",
  "title": "MyLEDThing",
  "description": "RGB LED torchiere",
  "@type": ["Thing", "iot:Light"],
  "securityDefinitions": {
    "default": {"scheme": "bearer"}
  },
  "security": ["default"],
  "properties": {
    "brightness": {
      "@type": ["iot:Brightness"],
      "type": "integer",
      "minimum": 0,
      "maximum": 100,
      "forms": [ ... ]
    }
  },
  "actions": {
    "fadeIn": {
      ...
    }
  }
}
```

- CGLL Platform - BIM

- IoT Data Hub
- Dashboards

<https://www.evosoftware.com/en/digitalization-offering/saywot/>

- Desigo CC – BIM
- Say WoT!

<https://www.eclipse.org/ditto/2022-03-03-wot-integration.html>

- Eclipse Ditto - Digital twin

Discovery

Introduction Mechanisms

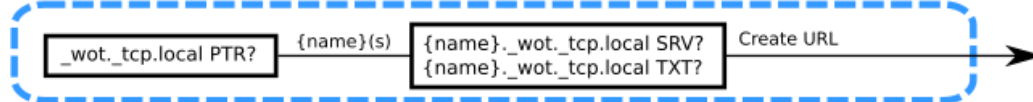

Direct

Well-Known URIs

DNS-Based Service Discovery

CoRE Link Format and CoRE Resource Directory

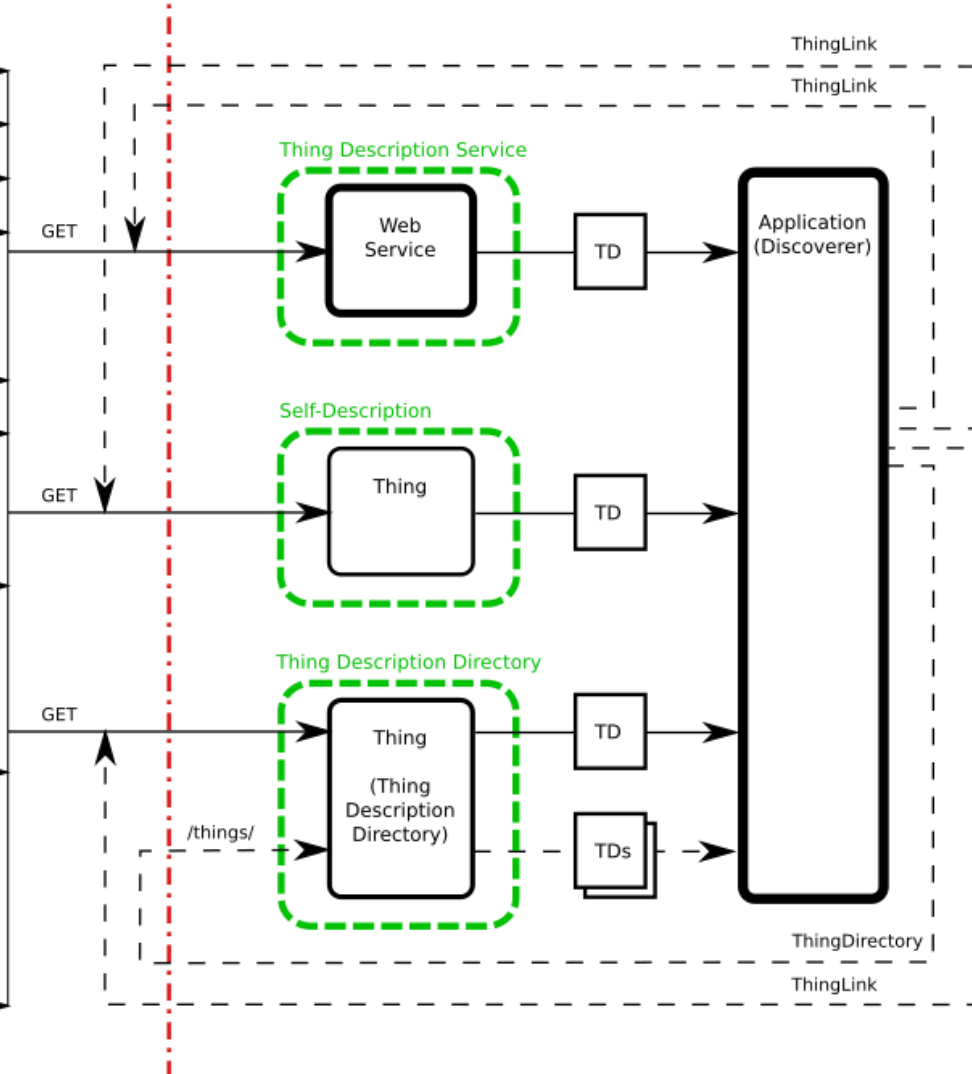

DID Documents

URLs

Auth

Exploration Mechanisms

Key Geospatial Data Issues in TDs

1. Location data may be static or dynamic
 - Use links to identify source of data
 - Use link to point at source of location data
 - Link can point to self, e.g. current TD, for static location data
 - Link can point to affordance, e.g. a property, for dynamic location data
 - Link can point to another TD if location data provided by another Thing
2. Location data can have various representations and options
 - Coordinate-based (e.g. latitude/longitude)
 - Semantic (e.g. room/floor in a building)
 - Optional data (e.g. velocity, elevation)
 - Use semantic annotations to identify fields in data
3. Time of last update may be important
 - Optional last-update field/semantic annotation

Example TDs using Geolocation

- [Simple static installation, using schema.org](#)
- [Static installation, using modular \(proposed\) geolocation ontology](#)
- [Dynamic installation, using internal geolocation resource](#)
- [Dynamic installation, using separate geolocation service](#)
- [Dynamic installation, geolocation service](#)

Discovery extensions:

- Spatially-aware introduction mechanisms (e.g. ext. DNS-SD or DID)
- Query mechanisms for Directories (GeoSPARQL and/or JSONPath ext.)

Goals/Proposal

1. Identify Geospatial information
 - In TDs (static)
 - Available from Things directly (dynamic)
2. Find TDs using Geospatial search
 - Geospatial queries in Discovery

Note:

- Currently we don't even have a mandatory query language in WoT Discovery (waiting for JSON Path to get finalized...)
 - WoT Discovery update deferred to next charter (waiting for TD 2.0 to be finalized...)
 - Also want to align with NGSI-LD binding (in progress)
- Proposal: work on data model (1) first, publish Note for incubation and testing, consider geospatial Discovery (2) in next round of standardization.

ETSI ISG CIM

- ETSI: <https://www.etsi.org/>
- ISG CIM:
 - <https://www.etsi.org/committee/cim>
 - Industry Specification Group (ISG)
cross cutting
Context Information Management (CIM)
- Deliverable of interest: NGSI-LD
 - [Context Information Management \(CIM\): NGSI-LD API](#)
 - “aims to enable applications to discover, access, update and manage data and context information from many different sources”
- Related stakeholders:
 - FiWare: <https://www.fiware.org/>
 - https://fiware-datamodels.readthedocs.io/en/stable/ngsi-ld_howto/

Liaison Activity

- Simple Liaison Established
 - Kazuyuki “Kaz” Ashimura as contact
- Bi-weekly calls planned starting October 14
 - Open to all WoT IG/WG members
- Draft goals: [wot: proposals/liaisons/ngsi-ld.md](https://wot-proposals/liaisons/ngsi-ld.md)

“... evaluate the potential of using W3C WoT Things Models for the description of NGSI-LD entity types as well as specifying how default WoT Things Descriptions can be derived from WoT Things Models using the NGSI-LD API as the form to interact with Things.”
- Potential for an “NGSI-LD API binding” with applicability to FiWare
- Applicable especially to Smart City and Smart Building use cases
